GitHub Mission Card

RamRodz Robotics · Team 6366 · Lesson 8 Challenge

RAM RODZ ROBOTICS | TEAM #6366 | HILLCREST & WOODMONT HIGH SCHOOLS · SIMPSONVILLE, SC

Mission Progress **0 / 20 steps**

1 Create Your GitHub Repository

0 / 4

- [ ] Sign in to **github.com** in your browser
  Use your team GitHub account or personal account
- [ ] Click **+ New repository** (top-right + button)
- [ ] Name it **RamRodz2025Robot**, set to **Private**, check **Add README**
  In the .gitignore dropdown, search for "WPILib" if available — otherwise skip it
- [ ] Click **Create repository** — you should see the repo page with a README file

What is the URL of your new repo?

2 Clone the Repo into VS Code

0 / 4

- [ ] On the GitHub repo page, click the green **Code** button → copy the **HTTPS** URL
- [ ] In VS Code open the Command Palette and run **Git: Clone**

  `Ctrl+Shift+P → type "Git: Clone" → Enter`

  Paste the URL, choose a folder on your computer, click Open when asked
- [ ] Open the Source Control panel — confirm it shows your repo with a clean state

  `Ctrl+Shift+G`
- [ ] In Source Control, confirm the Changes list is empty — that means your repo is clean with no pending edits

  The Source Control icon in the sidebar shows a numbered badge when there are changes — it should show nothing right now

✏️ **What branch name does the bottom-left VS Code status bar show?**

3 Make a Change and Commit It

0 / 5

- [ ] Open **README.md** in VS Code and add one line of text at the bottom

  For example: Team 6366 RamRodz — Simpsonville, SC

- [ ] Open Source Control (**Ctrl+Shift+G**) — confirm README.md appears under *Changes*

  The Source Control icon should show a badge with the number 1

- [ ] Stage the change — hover over README.md in the Changes list and click the **+** icon

  The file moves up to the Staged Changes section

- [ ] Type a commit message in the box at the top and press **Ctrl+Enter**

  ```
  Message: "Update README with team info"
  ```

  Use an active-voice message that describes WHAT you did, not just "update"

- [ ] Click **Sync Changes** ⟳ to push to GitHub

  Reload the GitHub page in your browser — you should see your new README text!

🖍️ **What commit message did you use? Why did you choose those words?**

4 Create a Branch and Work on It

0 / 4

- [ ] Click the branch name in the bottom-left status bar → choose *Create New Branch...* → type **feature-lifter** → press Enter

  The status bar updates immediately to show "feature-lifter" — you're now on the new branch

- [ ] Create a new file called **LifterNotes.md** in the VS Code Explorer and write a one-line description of the LifterSubsystem inside it

  Right-click the Explorer panel → New File → name it LifterNotes.md

- [ ] In Source Control: click **+** to stage the file, type a message, press **Ctrl+Enter** to commit

  ```
  Message: "Add LifterSubsystem notes"
  ```

- [ ] Click **Sync** ⟳ to push the branch to GitHub

  *Go to GitHub and confirm you can see **feature-lifter** in the branch dropdown*

✏️ **Click the status bar → switch to main. Is LifterNotes.md in the Explorer? Why or why not?**

5 Merge the Branch into Main

0 / 3

💡 **HOW TO MERGE IN VS CODE**

Click the branch name in the status bar → switch to **main** → then press `Ctrl+Shift+P` and choose **Git: Merge Branch...** → select **feature-lifter** → then click **Sync Changes** ⟳

- [ ] Click the status bar branch name → switch back to **main**, then use `Ctrl+Shift+P` → **Git: Merge Branch...** → choose **feature-lifter**

  ```
  Status bar → main → Ctrl+Shift+P → Git: Merge Branch…
  ```

- [ ] Click **Sync Changes** ⟳ to push the updated main branch to GitHub

  ```
  Source Control → Sync Changes ⟳
  ```

  On GitHub, confirm LifterNotes.md is now visible on the main branch

- [ ] Open the **Source Control** panel (`Ctrl+Shift+G`) and look at the timeline — find your three commits

  ```
  Ctrl+Shift+G → Source Control panel
  ```

  You should see the README commit, the LifterNotes commit, and a merge commit in the Git history

🖍️ **Describe the first two commits you can see in the Source Control history:**

🔥 Bonus — Simulate a Competition Day

Optional

Do this after completing Missions 1–5. No guidance — figure out each VS Code step on your own using the quick reference from the lesson.

- [ ] Create a branch called **auto-routine** from main
- [ ] Add a file called **AutoNotes.md** with at least two lines of text describing your auto idea
- [ ] Commit and push the branch — without copying the commands from above
- [ ] Merge **auto-routine** into main and push to GitHub

✏️ **Describe each VS Code step you used — from memory, no looking!**
